The Bechtel Pueblo Team

Proven performers, good neighbors

PARSONS

The Bechtel Pueblo Team has been selected by the Department of Defense's Assembled Chemical Weapons Alternatives program to design, build, operate and close a plant to destroy the chemical weapons stockpile stored at the Pueblo Chemical Depot in Colorado. The U.S. Army and the local community expect the contractor for the Pueblo Chemical Agent-Destruction Pilot Plant to meet the highest standards of safety, performance, and corporate citizenship. The Bechtel Pueblo Team is uniquely qualified to meet these high expectations.

Our companies have successfully designed, built, and/or operated all the chemical weapons destruction facilities in the United States, and our key managers have extensive experience in all aspects of chemical demilitarization. Our team members include:

Bechtel National, Inc. Bechtel is recognized as the world leader in safely managing large, complex engineering, construction, and remediation projects. Bechtel has over 20 years of experience with U.S. chemical weapons elimination programs, including the design, construction, and operation of the Aberdeen Chemical Agent Neutralization Facility, construction of the Anniston Chemical Agent Disposal Facility, and numerous Cooperative Threat Reduction projects in the former Soviet Union. In its 104-year history, the company has completed over 20,000 projects on all 7 continents and is known for demonstrating the highest standards of safety and integrity.

Washington Demilitarization Company. Washington Demilitarization Company (WDC) is a wholly-owned subsidiary of Washington Group International, a leading international engineering and construction firm. WDC has over 32 years of experience with the U.S. chemical weapons elimination program as prime contractor at the Pine Bluff, Umatilla, Anniston, and Johnston Atoll facilities. The company offers a full life-cycle of services as a preferred provider of premier science, engineering, construction, program management, and development in 14 major markets, including energy, environmental, government, operations and maintenance, and water-resources.

Parsons. Parsons has more than 20 years of continuous involvement in U.S. and international chemical weapons elimination, including design of six U.S. facilities, design-construction-operations of the Newport Chemical Agent Disposal Facility, and engineering management of the chemical agent neutralization facility in Shchuch'ye, Russia—the largest facility of its kind. Under PMACWA's leadership, Parsons developed the patented WHEAT neutralization technology, accepted by stakeholders for destruction of the Pueblo stockpile. Parsons—a leader in engineering, construction, environmental services, and program management—provided environmental services at Pueblo from 1989 to 2001.

Battelle Memorial Institute. Battelle develops and commercializes technology for industry and government. As one of the world's largest private independent research and development companies, it has more than 5,000 projects for 1,300 different customers. Key areas of expertise are environmental technology, defense systems, agrifood, medical products, pharmaceuticals, and energy.
